

# MiFID II:

## Extraterritorial Impacts on Asia

In constructing this grid, there are several highly nuanced views that we have taken into account – while it is generally true that a non-EU branch is part of the same legal entity as its EU parent, it is worth mentioning and taking into consideration several legal interpretation principles used when determining ET scope, namely:

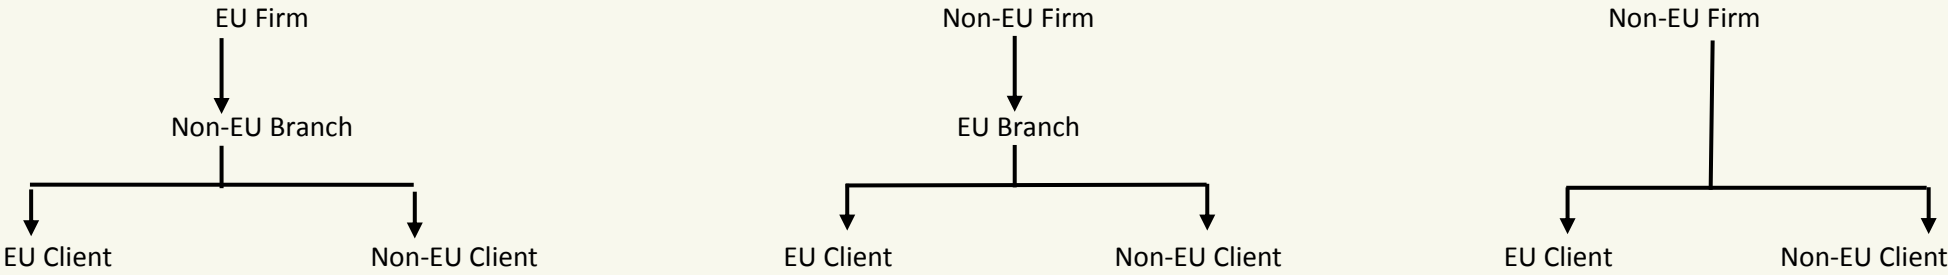

- (i) reliance in part on historical interpretation principles under MiFID I (which had no - or very limited application - to non-EU branches of EU firms);
- (ii) ET application depends on the nature of the MiFID II obligations (organizational or investor protection in nature) as well as underlying rationale for the obligation;
- (iii) (no precedent and continuing lack of clear regulatory guidance for determining MiFIR scope (thereby presenting the biggest challenge for firms when determining ET scope for MiFIR requirements); and
- (iv) some of the MiFIR requirements can be read purposively as not being applicable (or appropriate) for transactions with no EU nexus.

\*For the purposes of this grid, all references to EU include the EEA countries as well

| <p><b>Extraterritorial Reach</b></p> <p>→</p> <p><b>Topic / MiFID II Area</b></p> <p>↓</p> |   |  |  |
|--|---|--|--|
| <p><b>General Comments</b></p>   | <p>On the specific topic of non-EU branches of EU firms providing services back into the EU, this depends on the varying approaches that the different EU regulators and/or national competent authorities (NCAs) may take in relation to access issues. Also, EU clients are often required to trade with local branches if they are accessing local-currency denominated products (because these are exchange-controlled). Finally, there could be situations where reverse inquiry by EU-based clients to non-EU branches may result in these non-EU branches providing services back into the EU.</p> | <p>The EU branch of a non-EU Firm which is authorised under the EU member state's current national (non-MiFID II) regime will not have a passport for services cross-border within the EU. Where the EU member state in which the branch is located, opts in under MiFID II (Directive) Art 39 (which requires a local authorised branch for the provision of services to retail/elective professionals), then that branch may have a passport to provide cross-border services to eligible counterparties (ECPS)/per se professionals (but not retail/elective professionals) in other member states if the relevant 3rd country's regulatory regime has been assessed as 'equivalent' by ESMA (under MiFIR Art 47).</p> <p>Where the member state does not opt in to Art 39, the branch is subject to the member state's national law, which most likely would be MiFID II/MiFIR equivalent so as not to treat non-EU branches more favourably than EU firms. [There would be no obligation on the non-EU branch to register with ESMA.]</p> | <p>Cross-border services to ECPS/per se professionals: if the relevant 3rd country's regulatory regime has been assessed as 'equivalent' (under MiFIR), the Non-EU firm could provide services cross-border into the EU without local authorisation requirements.</p> <p>Cross-border services to retail/elective professionals: a locally licensed presence may be required, depending on each EU member state's national licensing regime. No change under MiFID II.</p> |

| <p><b>Extraterritorial Reach</b></p> <p>→</p> <p><b>Topic / MiFID II Area</b></p> <p>↓</p>   | <pre> graph TD     subgraph Scenario1         A1[EU Firm] --&gt; B1[Non-EU Branch]         B1 --&gt; C1[EU Client]         B1 --&gt; D1[Non-EU Client]     end     subgraph Scenario2         A2[Non-EU Firm] --&gt; B2[EU Branch]         B2 --&gt; C2[EU Client]         B2 --&gt; D2[Non-EU Client]     end     subgraph Scenario3         A3[Non-EU Firm] --&gt; B3[ ]         B3 --&gt; C3[EU Client]         B3 --&gt; D3[Non-EU Client]     end </pre>  |  |   |   |
| <p><b>Pre- and Post-Trade Transparency (General)</b></p>   | <p>There is the view that pre-trade transparency may be construed as not applicable to trades conducted by persons operating outside of the EU (even if remotely booked into EU locations) because Pre-Trade is a market rule (MIFIR requirement with no precedence) applicable to EU trading activity, namely trading activity conducted from EU firms through their EU branches. Pre-trade applies to firms when acting as Systematic Internalisers only, and SI status is assessed based on trading activity conducted from EU branches of EU investment firms. The rules make no provision for how pre-trade should (or could) be complied with when servicing clients from non-EU branch locations. Recent level 3 guidance on the topic of trade reporting extended post trade transparency to trades conducted on “similar” 3<sup>rd</sup> country venues, or with 3<sup>rd</sup> country firms, when filling EU client orders from EU branch locations, but made no mention of imposing pre-trade requirements. In any event, pre-trade pricing offered outside the EU is not consistent or directly comparable to pricing offered in the EU due to the fact that market risk will most likely be hedged on different markets giving rise to different pricing criteria.</p> |  |   |   |
| <p><b>Off-Venue Pre-Trade Transparency for Equities MiFIR Art 14, 15 and 17 (RTS 1)</b></p> <p>The pre-trade transparency obligations apply to systematic internalisers (SIs) in respect of equity instruments. Equity instruments are shares, depository receipts, ETFs, certificates and other similar products (Equities). The obligations apply where the trade is below standard market size. Limited obligations apply in respect of illiquid equities.</p> <p>The pre-trade transparency obligations require the SI to make public firm two-way quotes on a regular and continuous basis during normal trading hours.</p> | <p>While European passporting legislation does not contemplate non-EU branches of EU firms providing services back into the EU, please refer to the discussion in “general comments” above.</p> <p>As discussed in “general comments” above, in certain member states, there may be limited local exceptions which would require local advice.</p> <p>See also comment re non-EU clients.</p>  | <p>It is arguable that the obligation applies to investment firms that are SIs in the relevant Equity instrument, even where the activity is undertaken in the non-EU branch (irrespective of client location). However, see discussion in the “Pre- and Post-Trade Transparency – General” section above and the observation immediately below.</p> <p>There is however some conflicting guidance and no clear expression of policy intent.</p> | <p>The obligations do not apply to a non-EU firm.</p> <p>However, if the non-EU firm has an EU branch, that branch will be subject to the local regulatory regime in which it is based. Even though the requirements for non-EU branches is determined on the basis of local law, local jurisdictions implementing MiFID II can treat EU branches of non-EU firms no better off than EU investment firms.</p> <p>As such, we expect that local regimes will require EU branches of non-EU firms to undertake the SI calculations and be subject to the pre-trade transparency regime in relation to local branch business (NB. Branch will not have EU passporting rights, absent MiFIR third country equivalence).</p> | <p>The obligations do not apply to a non-EU firm. However, if a non-EU firm is providing services to an EU client, it will need to consider the local licensing regime of the jurisdiction in which the client is based</p> <p>N.A.</p> |
| <p><b>Booking Location EU</b></p>  | <p>See above as to whether the obligation applies. Location of trade booking is unlikely to be determinative.</p>  |  |   |   |
| <p><b>Booking Location Non-EU</b></p>  | <p>If the EU branch is deemed an SI in the relevant financial instrument, the pre-trade transparency requirements will be applicable for relevant branch business.</p>   |  |   |   |

| <p><b>Extraterritorial Reach</b></p> <p>→</p> <p><b>Topic / MiFID II Area</b></p> <p>↓</p>  |   |  |   |  |
|---|---|--|---|--|
| <p><b>Off-Venue Pre-Trade Transparency for Non-Equities</b><br/>MiFIR Art 18 (RTS 2)</p> <p>Pre-trade transparency obligations apply to SIs in respect of non-equities, which are bonds, structured finance products, emission allowances and derivatives (<b>Non-Equities</b>). The obligations apply where there is a liquid market (noting that there are limited obligations in respect of illiquid instruments) and where the trade is below SSTI.</p> <p>If a client requests a quote from an SI and the SI agrees to provide the quote, the pre-trade transparency obligations require the SI to make the quote firm. The quote must also be disclosed to the public and made available to other clients on an executable basis, subject to the commercial policy of the SI.</p> | <p>While European passporting legislation does not contemplate non-EU branches of EU firms providing services back into the EU, please refer to the discussion in “general comments” above.</p> <p>As discussed in “general comments” above, in certain member states, there may be limited local exceptions which would require local advice.</p> <p>See also comment re non-EU clients.</p> | <p>It is arguable that the obligation applies to investment firms that are SIs in the relevant non-equity instrument, even where the activity is undertaken in the non-EU branch (irrespective of client location). However, see discussion in the “Pre- and Post-Trade Transparency – General” section above and the observation immediately below.</p> <p>There is however some conflicting guidance and no clear expression of policy intent.</p> | <p>The obligations do not apply to a non-EU firm.</p> <p>However, if the non-EU firm has an EU branch, that branch will be subject to the local regulatory regime in which it is based. Even though the requirements for non-EU branches is determined on the basis of local law, local jurisdictions implementing MiFID II can treat EU branches of non-EU firms no better off than EU investment firms.</p> <p>As such, we expect that local regimes will require EU branches of non-EU firms to undertake the SI calculations and be subject to the pre-trade transparency regime in relation to local branch business (NB. Branch will not have EU passporting rights, absent MiFIR third country equivalence).</p> | <p>The obligations do not apply to a non-EU firm. However, if a non-EU firm is providing services to an EU client, it will need to consider the local licensing regime of the jurisdiction in which the client is based</p> <p style="text-align: right;">N.A.</p> |

| <p><b>Research Unbundling &amp; Commission Sharing Agreements (CSAs)</b><br/><b>MiFID II Art 24</b></p> <p><a href="#">Commission Delegated Directive – Point 26</a></p> <p>MiFID II requires that research should be paid for separately, in one of two ways: through a specially designated Research Payment Account (RPA) – by assessing each piece of research according to its value and then paying for it, or directly by the fund itself.</p> <p>Commission Sharing Agreements (CSAs) now allow for brokers to withhold some of the trading commissions they receive for research. While CSAs are not banned under MiFID II, they cannot be linked to volumes traded (which was the model in the past). The CSAs can be linked to RPAs but in a manner consistent with MiFID II. This may result in a need for re-papering CSA/RPA agreements.</p> | <p>If an EU firm (or a branch of an EU firm) provides research services to an investment firm within the EU, then the research unbundling obligations apply. Research services provided to investment firms outside the EU are not covered by the “research unbundling” requirement.</p>  | <p>The branch of the non-EU firm will be subject directly to the MiFID II requirements if the branch is in an Article 39 “Opt-In” country and will most likely be subject to the MiFID II requirements once (as is expected) most of the countries that have not opted in adopt the MiFID II rules. Thus, the branch of the non-EU firm will be subject to the research unbundling obligation. Also, the non-EU branch cannot be treated more favorably than another branch of an EU firm – for that reason too, the research unbundling obligations will apply.</p> <p>There are added issues depending on whether the regulator in the country/ jurisdiction where the EU entity’s parent is domiciled, may have rules restricting the ability of broker dealers to charge for research (for instance, in the US, in order to charge for research, an entity has to register as an Investment Advisor. Similar rules may apply in Asian jurisdictions).</p> | <p>The branch of the non-EU firm will be subject directly to the MiFID II requirements if the branch is in an Article 39 “Opt-In” country and will most likely be subject to the MiFID II requirements once (as is expected) most of the countries that have not opted in adopt the MiFID II rules. | <p><b>Post-trade /Clearing STP (Straight-Through-Processing) Requirements</b></p> <p>Article 29 of MIFIR states that:</p> <p>a) The operator of a regulated market shall ensure that all transactions in derivatives that are concluded on that regulated market are cleared by a CCP and</p> <p>b) CCPs, trading venues and investment firms which act as clearing members shall have in place effective systems, procedures and arrangements in relation to cleared derivatives to ensure that transactions in cleared derivatives are “submitted and accepted for clearing as quickly as technologically practicable using automated systems” (in other words – through “Straight Through Processing (STP).</p> | <p><b>EU-regulated entities (including branches/subs of non-EU entities)</b> – the identity/location of the client is not relevant (since the trade is through a CCP/centrally cleared in Europe)</p> <p>The clearing obligation will apply to all transactions in derivatives that are executed through an EU regulated market. The STP obligation will affect trades which are undertaken through trading venues in the EU, cleared by an EU CCP, or which are cleared through an EU regulated CCP clearing member.</p>   | <p><b>Non-EU entities with no presence in the EU</b> - the identity/location of the client is not relevant (since the trade is through a CCP/Centrally cleared</p> <p>The impact will be the same as that for EU-regulated entities – As long as the transaction in derivatives subject to a clearing obligation via a CCP in the EU is executed through an EU regulated market, the non-EU entity located in APAC would still be subject to the STP obligation.</p> |  |

**Product Governance: Manufacture and distribution of Financial Products**

**a) Products manufactured in the EU for distribution outside the EU:**

ESMA has now published a final report containing the final version of the guidelines on MiFID II product governance requirements.

For EU manufacturers of financial instruments the guidelines require:

- Elaborate product governance processes centered on the identification of the target market and differentiation across different segments of the target market (including extensive discussions with the distributor on this process)

**For distributors of financial instruments (even if they are based outside the EU) the guidelines cover the following:**

- Tying in product governance processes with suitability and appropriateness
- Identifying different target market categories and following differentiated distribution strategies for each of these categories
- portfolio management, portfolio approach, hedging and diversification
- Conduct regular reviews with the manufacturer to ensure MIFID II Product Governance requirements are being met
- application of product governance requirements to the distribution of products that were manufactured before the date of application of MiFID II, if they continue to be distributed after January 3, 2018 when MIFID II comes into effect
- Differentiation of retail clients from professional clients (and certain categories of retail clients who “elect” to be treated as professional clients)
- Both manufacturers and distributors should identify “negative” target markets

The distributor obligations are only directly imposed on MIFID firms, but 3<sup>rd</sup> country distributors facing MIFID manufacturers may be impacted indirectly through contractual obligations passed down by MIFID manufacturers.

**b) Products manufactured outside the EU for distribution in the EU.**

For non-EU firms (for instance, those in APAC) manufacturing products for distribution for distribution within the EU, there are no direct impacts – however, because the distributors of these products within the EU are caught by the guidelines on MIFID II product governance requirements applicable to distributors, the non-EU manufacturers of such products are **indirectly** impacted. Before distributing non-EU products within the EU, EU distributors would require manufacturers to comply with certain minimum standards as laid down by ESMA, before distributing these products.

**For the specific and more detailed guidelines pertaining to EU distributors, please see above.**

The manufacturer obligations are only directly imposed on MIFID firms, but 3<sup>rd</sup> country manufacturers facing MIFID distributors may be impacted indirectly through contractual obligations passed down by MIFID distributors.

**Algo Trading: (not directly relevant to non-EU market participants – unless they are admitted/allowed to trade on EU RMs/MTFs/OTFs)**

MiFID II introduces closer regulation and monitoring of algorithmic trading, imposing new and detailed requirements on algorithmic traders (in certain cases, even where they are exempt from authorisation under MiFID II) and the trading venues on which they trade (including regulated markets (RMs), multilateral trading facilities (MTFs) and organised trading facilities (OTFs)). An MTF or OTF must have the ability to ensure orderly trading under severe market stress, and must have systems and controls in place that can cope in stressed market conditions. Trading venues will also be required to give their relevant member state “Competent Authority” access to their order book, to enable regulators to monitor trading activity. There are also requirements for minimum tick sizes and synchronization of clocks. Trading venues must also have “circuit breakers” and “controls” in case trading gets disorderly and must have systems to manage volatility arising from “fat finger” type errors.

Firms engaging in algo trading must have effective business continuity arrangements to deal with any system failure and ensure their systems are tested and monitored. MiFID II also places obligations on firms engaging in “market-making strategies” (which are defined in the technical standards) and in addition, there are obligations placed on trading venues to enter into agreements with such firms. Investment firms will also be required to continuously test their algorithms and have “kill switches” in place to cancel all orders at all trading venues (in case any negative impacts that the algos might have, are identified). Finally, investment firms are also required to have in place a number of pre-trade risk limits.

## Increased Conduct of Business Requirements

During the summer of 2016, the European Commission published delegated acts containing detailed rules for the Conduct of Business requirements. Specific rules have been formulated by the Commission in relation to the following issues: 1) Inducements and Commissions (**covered above**); 2) recording of telephone calls and e-mails; 3) Product design and the assessment of suitability and appropriateness for clients; 4) Significant enhancements to requirements to manage conflicts of interest 5) product governance (**covered above**) 6). Strengthened arrangements to protect client asset ownership in insolvency 7) Investment Research (**covered above**) and 8) Underwriting and Placing.

**Practical Impacts in APAC: MIFID II introduces new requirements on the identification, management and disclosure of conflicts of interest for corporate finance desks before accepting a mandate. This includes prescribed disclosures to clients of specific conflicts of interest regarding fees, underwriting and placing operations, targeted investors, and clients and individuals involved. APAC entities should conduct an impact analysis on the investment banking business, and identify documentation, contracting and operational impact involving investment banking stakeholders, and legal and compliance teams.**

## Footnotes

**1. Liquidity Determination:** ESMA will make available a list of instruments that are deemed to be liquid (for the purposes of determining whether pre/post-trade transparency obligations are met). For bonds in particular, our understanding is that this list will be published in December – furthermore, based on submissions made by trading venues to their respective NCAs (National Competent Authorities) which in turn have submitted this information to ESMA, only about 1% of all bonds outstanding (by unique ISIN), but accounting for over 50% of volumes, will be deemed to be liquid – please note that this is not final, but an expectation based on the information available.

**As a practical matter, APAC entities, branches or subsidiaries of APAC entities in the EU, or branches or subsidiaries of EU entities in Asia are not involved in the exercise to determine liquidity. ESMA will publish a list of “liquid” instruments, just prior to MIFID II going into effect in January 2018. Liquidity determination for pre- and post-trade transparency and data reporting waivers can then be made with reference to this list.**

**2. New categories of Trading Venues:** Under MIFID, there are several new categories of trading venues – Regulated Markets (RM), Multilateral Trading Facilities (MTFs) and Organized Trading Facilities (OTFs):

**a) Regulated Markets (RMs):** An RM is defined as a multilateral system operated by and/or managed by a market operator, which brings together or facilitates the bringing together of multiple third-party buying and selling interests in financial instruments. RMs will be subject to enhanced governance requirements such as numerical limits on directorships, diversity obligations, and mandatory nomination committees.

**b) Multilateral Trading Facilities (MTFs):** means a multilateral system, operated by an investment firm or a market operator, which brings together multiple third-party buying and selling interests in financial instruments – in the system and in accordance with non-discretionary rules. MTFs have been aligned with RMs so that both have systems and measures in place to manage, identify and mitigate risks, (b) effective arrangements for the efficient and timely execution of transactions on its systems and (c) sufficient financial resources.

**c) Organized Trading Facilities (OTFs):** An OTF is a multilateral system which is not an RM or an MTF and in which multiple third-party buying and selling interests in bonds, structured finance products, emission allowances or derivatives are able to interact in the system. Unlike RMs and MTFs, operators of OTFs will have discretion as to how to execute orders, subject to pre-transparency and best execution obligations. Specifically, OTF operators are permitted to engage in matched principal trading in the products above, whereas an MTF operator cannot. Additionally, OTF operators will be required to comply with the investor protection obligations in articles 24 (information to clients), 25 (suitability), 27 (best execution) and 28 (client order handling) of MiFID 2 whereas MTFs are not required to do so.

**3. Systematic Internalisers:** Systematic internalisers (SIs) are investment firms which, on an organised, frequent, systematic and substantial basis, deal on own account by executing client orders outside an RM, MTF or OTF without operating a multilateral system. Accordingly, an investment firm will only constitute a systematic internaliser where it is proposing to execute a client order". MTFs, OTFs and SIs cannot co-exist within the same entity. Essentially, a systematic internaliser is a counterparty and not a trading venue. For instance, a single-dealer platform, where trading always takes place against a single investment firm should be considered a systematic internaliser, whereas a multi-dealer platform, with multiple dealers interacting for the same financial instrument, should not be considered a systematic internaliser.

**Practical Impacts in APAC/non-EU: The trading volumes in EU instruments traded in non-EU branches of EU-HQ entities could be added to trading volumes in the same instrument at the EU-headquartered parent entity, to determine if that entity is/is not a systematic internaliser. This is an indirect impact.**

**4. LIS (Large-in-Scale):** These orders are those that are “large” in size compared to normal market orders. This determination is made by the National Competent Authority (NCA) where the bond (or other financial instrument) is listed. This determination is necessary for decisions to be made if pre-trade transparency waivers (and post-trade reporting deferrals) are applicable, in the case of the particular financial instrument concerned. This relates to trades carried out on a trading venue.

**5. SSTI (Size Specific to Instrument):** This refers to Actionable indications of interest (IOIs) in request for quote (RFQ) and voice trading systems that are above a “size specific to the instrument” and this threshold is in turn set by national regulators as a “percentile” of the LIS thresholds (in other words, they are set at a lower level). The SSTI is also the upper limit for Systematic Internaliser (SI) firm quotes. The SSTI determination is necessary for decisions to be made if pre-trade transparency waivers (and post-trade reporting deferrals) are applicable. The SSTI thresholds apply to RFQ, Voice Trading and OTC venues.
